

## FlexForms SYSTEM

More Promotional Materials  
Manage Promotions Yourself  
More Customization Options  
More Promotional Placements  
Opportunity for More Sales

### FlexForms by CCBill

#### Enhanced Promotional and Up-Sell Capabilities

Including additional offers during the checkout process is a proven way to increase sales, drive branding, and diversify your offerings to the buyer. And within FlexForms, promotions, up-sales, bonus sites, and cross-selling have been expanded to provide instant and flexible publication of your additional offerings. Up-sells and bonus items can now be configured directly in FlexForms and no longer delayed by lengthy approval processes – thus allowing you movement and control, as well as flexibility for your promotional efforts. Bonus offers are now immediately included on your payment form with new banners and visuals to grab attention. Cross-sales with other merchants have been streamlined, thus allowing you to instantly include additional items in the dynamic, drag-and-drop payment flows in order to maximize sales.

Promotions need to capture the interest of the buyer to work. CCBill has created the ability to upload and store images and banners for your promotions, as well as add flexible wording to actively promote offers to the consumer, with the goal of including that offer with the transaction.

#### The FlexForms Advantage

FlexForms is designed with one purpose — to provide an easy-to-use flow and forms system that will help increase conversions and traffic. This dynamic way of setting up streamlined payment flows allows you to create custom cascades, route traffic, control design and branding, conduct various forms of testing, institute better promotions, and reach a larger group of buyers. As a customizable billing solution with a simple drag-and-drop process, FlexForms helps you optimize international payments, promotional features, and custom integrations for a better process and purchase experience.

FlexForms is the next evolution of payments. Not just for your business today, but for all of your future payment system needs.

#### FlexForms Features:

**All Payment Options on One Form.** We include all your accepted payment options on one form.

**WebWidget.** Linking code for your website that directs your consumer to the payment form.

**A | B Testing.** Test any combination of a FlexForms payment form, a legacy CCBill payment form, or a form from an alternate processor through one link.

**Responsive Forms.** Take payments from any location and device, while consumers see the form how they should, based on what they are using at the time.

**Multiple Language, Image and URL Inventories.** Create your own inventory of branding images and directional URLs for instant customization of your forms for any look or any offer.

**Trusted CCBill Brand and Support.** Reassure your consumers that they are making a safe and reliable purchase.

## More FlexForms Benefits

### Globally Responsive Forms

FlexForms is designed to accommodate not just different devices, but also different browsers and locations. The geo-targeting attributes of FlexForms ensure global consumers see their checkout information at their local level.

### Dynamic Payment Flows

Each payment flow is a defined pathway that can be set up based on payment selection. Self-managed payment flows allow you to make any changes or updates to them without needing to update your payment links and/or websites.

### A | B Testing

Easily test any variation of your payment forms so you can see which color, layout, price point, or banner offers the best conversions. Test options on multiple functions from legacy CCBill forms, different payment types, various FlexForms, or even with a payment form from an outside processor/biller.

### One Link, All Options

There is no need to set up multiple forms to accommodate different methods of payment. Use just one link for credit cards, debit cards, online checks, EU Debit/SEPA, and DirectPayEU payment methods. Everything is on one form, including currency and language.

### Sandbox Environment

Create and customize the checkout process, payment forms, and any settings before going live on the web. Additionally, perform instant customizations on your FlexForms payment links and allow your associates, marketers, or developers to participate in testing prior to launch.

### WebWidget: Dynamic Payment Button

The WebWidget is a customizable, innovative button anchoring your payment flow to your site and offering specific checkout information to your buyers, no matter where they are located. You can make changes to it within FlexForms and have them take effect without having to update the code on your website.

*"FlexForms makes setting up cascading billing a snap. The visual/graphic layout of building a payment flow makes things much easier and intuitive, compared to the legacy method of setting up cascading billing. The forms themselves are clean and modern looking and I love that you can add images to the FlexForms."*

Jason, Owner, Spunkworthy
